CS 61A Structure and Interpretation of Computer Programs Summer 2021 PRACTICE DIAGNOSTIC

INSTRUCTIONS

This is your exam. Complete it either at exam.cs61a.org or, if that doesn't work, by emailing course staff with your solutions before the exam deadline.

This exam is intended for the student with email address <EMAILADDRESS>. If this is not your email address, notify course staff immediately, as each exam is different. Do not distribute this exam PDF even after the exam ends, as some students may be taking the exam in a different time zone.

For questions with circular bubbles, you should select exactly one choice.

- \bigcirc You must choose either this option
- \bigcirc Or this one, but not both!

For questions with square checkboxes, you may select *multiple* choices.

- \Box You could select this choice.
- \Box You could select this one too!

You may start your exam now. Your exam is due at *<*DEADLINE*>* Pacific Time. Go to the next page to begin.

Preliminaries

You can complete and submit these questions before the exam starts.

- (a) What is your full name?
- (b) What is your student ID number?

1. (8.0 points) Significant Factors

(a) (3.0 points)

Implement significant, which takes positive integers n and k. It returns the k most significant digits of n as an integer. These are the first k digits of n, starting from the left. If n has fewer than k digits, it returns n. You may not use round, int, str, or any functions from the math module.

You may use pow, which raises its first argument to the power of its second: pow(9, 2) is 81 and pow(9, 0.5) is 3.0.

```
def significant(n, k):
   """Return the K most significant digits of N.
   # Case 1
   >>> significant(12345, 3)
   123
   # Case 2
   >>> significant(12345, 7)
   12345
   .....
   if _____
                     ----:
#
                 (a)
       return n
   return significant(_____)
#
                          (b)
                                         (c)
 i. (1.0 pt) Fill in blank (a).
```

ii. (1.0 pt) Which of these could fill in blank (b)?

- () k 1
- k / 10
- k // 10
- 🔾 k % 10
- () n 1
- 🔾 n / 10
- \bigcirc n // 10
- 🔾 n % 10

iii. (1.0 pt) Fill in blank (c).

(b) (5.0 points)

Implement factorize, which takes two integers n and k, both larger than 1. It returns the number of ways that n can be expressed as a product of non-decreasing integers greater than or equal to k.

```
def factorize(n, k=2):
    """Return the number of ways to factorize positive integer n.
    # Case 1
    >>> factorize(7) # 7
    1
    # Case 2
    >>> factorize(12) # 2*2*3, 2*6, 3*4, 12
    4
    # Case 3
    >>> factorize(36) # 2*2*3*3, 2*2*9, 2*3*6, 2*18, 3*3*4, 3*12, 4*9, 6*6, 36
    9
    .....
    if n == k:
        return 1
    elif _____:
#
             (a)
        return 0
    elif _____:
#
            (b)
        return factorize(n, k + 1)
    return _____
#
              (c)
 i. (1.0 pt) Fill in blank (a).
```

ii. (2.0 pt) Which of these could fill in blank (b)?

n == kn > kn < kn % k == 0n % k > 0n % k < 0 **iii. (2.0 pt)** Fill in blank (c).

2. (8.0 points) Please Register to Vote

Fill in each blank in the code example below so that its environment diagram is the following.**RESTRICTIONS.** You must use all of the blanks. Each blank can only include one statement or expression.Click here to open the diagram in a new window

```
_____
# (d)
register(____)
             (e)
#
(a) (2.0 pt) Which of these could fill in blank (a)?
    \bigcirc vote(ty)
    O vote(30)
     O vote
    O lambda nov: vote(nov) + third

lambda nov: vote(nov + third)

    O lambda nov: vote(nov) + ty
    O lambda nov: vote(nov + ty)
(b) (1.0 pt) Which of these could fill in blank (b)?
    \bigcirc third
    🔿 ty
    \bigcirc please
    ○ vote
(c) (1.0 pt) Which of these could fill in blank (c)?
    ○ third
    🔿 ty
    \bigcirc please
```

```
\bigcirc vote
```

(d) (2.0 pt) Fill in blank (d).

(e) (2.0 pt) Which of these could fill blank (e)? Check all that apply.

```
□ ty * 10
□ ty - 1 + 30
□ 30
□ third + 26
□ (lambda x: x + x)(15)
```

3. (10.0 points) Amazing Job Growth

Definition. A *repeatable* function is a function that returns a repeatable function.

Reminder. You may call built-in functions that do not require import, such as min, max, abs, and pow.

(a) (4.0 points)

#

#

Implement growth, which takes a number baseline and returns a repeatable function increase. When increase is called on a number observed, it prints the difference between observed and the smallest argument passed to growth or increase so far among the repeated calls.

```
def growth(baseline):
```

"""Return a function that can be called repeatedly on numbers and prints the difference between its argument and the smallest argument used so far (including baseline).

return increase

i. (2.0 pt) Fill in blank (a).

- ii. (2.0 pt) Which of these could fill in blank (b)?
 - \bigcirc increase
 - \bigcirc increase(under)
 - \bigcirc increase(observed)
 - O increase(baseline)
 - \bigcirc growth
 - growth(under)
 - growth(observed)
 - O growth(baseline)

(b) (6.0 points)

Implement maxer, a higher-order function that takes a function smoke, which takes a number and returns a number. The maxer function returns a repeatable function fire that takes a number y and prints the largest result of calling smoke on any value of y passed to fire so far among the repeated calls.

Assume that **smoke** is a deterministic pure function.

```
def square(x):
   return x * x
def maxer(smoke):
    """Return a repeatable function fire(y) that prints the largest smoke(y) so far.
   # Setup
   >>> g = maxer(square)
   # Case 1
   >>> h = g(2)(1)(3)(2)(-4) # print the largest square(y) so far
   4
   4
   9
   9
   16
   # Case 2
   >>> h = maxer(abs)(2)(1)(3)(2)(-4) # print the largest abs(y) so far
    2
   2
   3
   3
    4
    .....
   def fire(y):
          _____
#
           (a)
        def haze(z):
            if _____:
                  (b)
#
                z = y
            return ____
#
                      (c)
        return haze
   return fire
```

- i. (2.0 pt) Fill in blank (a). You may not write a return statement for this blank.
- **ii.** (2.0 pt) Fill in blank (b).

iii. (2.0 pt) Which of these could fill in blank (c)?

```
О у
```

- \bigcirc smoke(y)
- \bigcirc fire(y)
- fire(smoke(y))
- \bigcirc haze
- O haze(y)
- \bigcirc haze(smoke(y))
- \bigcirc z
- \bigcirc smoke(z)
- \bigcirc fire(z)
- \bigcirc fire(smoke(z))
- \bigcirc haze(z)
- \bigcirc haze(smoke(z))

No more questions.
